ITMediaScale 100-M

The modular scale solution

Product Description

The ITMediaScale is a modular scale consisting of several components, a weighing unit, a control PC (AIO), an optional side-mounted receipt printer, and an optional 2D barcode scanner.

Aside from its intelligent software, the entire unit is distinguished by its low-profile base, providing an unobstructed view of the merchandise in the display case.

A compact, integrated solution with no visible cables for the cash register, scale, and receipt printer, offering multifunctional capabilities such as linerless labeling for sealing bags and labeling pre-packaged goods.

Combined with the new integrated MediaPOS 100, it offers exceptional value for money and is ideal for any service counter or pre-packaged area.

The advantage of this innovative solution lies in the modularity of its components. This means that, unlike with a compact design, only individual components need to be upgraded or replaced if necessary. Units that don't require replacement can continue to operate, reducing maintenance and upgrade/service costs.

The optional receipt or label printer is mounted on the right side of the unit and is easily height-adjustable.

Additionally, an optional 2D barcode scanner can be installed, allowing the modular scale to be used as a complete weighbridge/POS system.

The ITMediaScale's practical, modular design optimizes service and can reduce operating and maintenance costs over its lifetime compared to alternative scale solutions.

Technical data

- Choice of ITMediaPOS 100 or 700 as a PC unit
- Optional receipt or label printer
- Optional 2D barcode scanner
- Mettler-Toledo Ariva-S weighing unit
- with software module for communication via POS6 / Dialog 6 between the load cell and the weighing application / cash register

Scope of delivery

- Base unit consisting of PC, mounting bracket,
- Weighing unit and receipt printer (optional)
- 220V EU power cable
- Manual and user documentation available for download
